slug: qemu-nfs
Authors: Andrew V.
summary: mount host nfs directory

At host machine

1. install nfs-common, nfs-kernel-server

```
sudo apt-get install nfs-common nfs-kernel-server
```

2. configure nfs server (nfs dir: for example /srv/nfs)
3. start nfs server

```
sudo service nfs-server start
```

4. start qemu machine with some specific options:

```
qemu-system-i386 -no-reboot -kernel vmlinuz-2.6.32-5-686 -hda debian_squeeze_i386_standar
```

At virtual machine

```
mkdir /tmp/t  
mount 10.0.2.2:/srv/nfs /tmp/t  
ls /tmp/t
```
